

Multi-Watershed Perturbation Response Traits

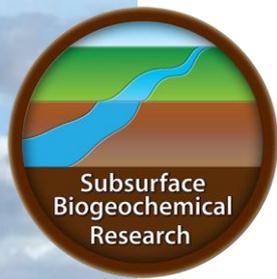

@JamesStegen

U.S. DEPARTMENT OF
ENERGY

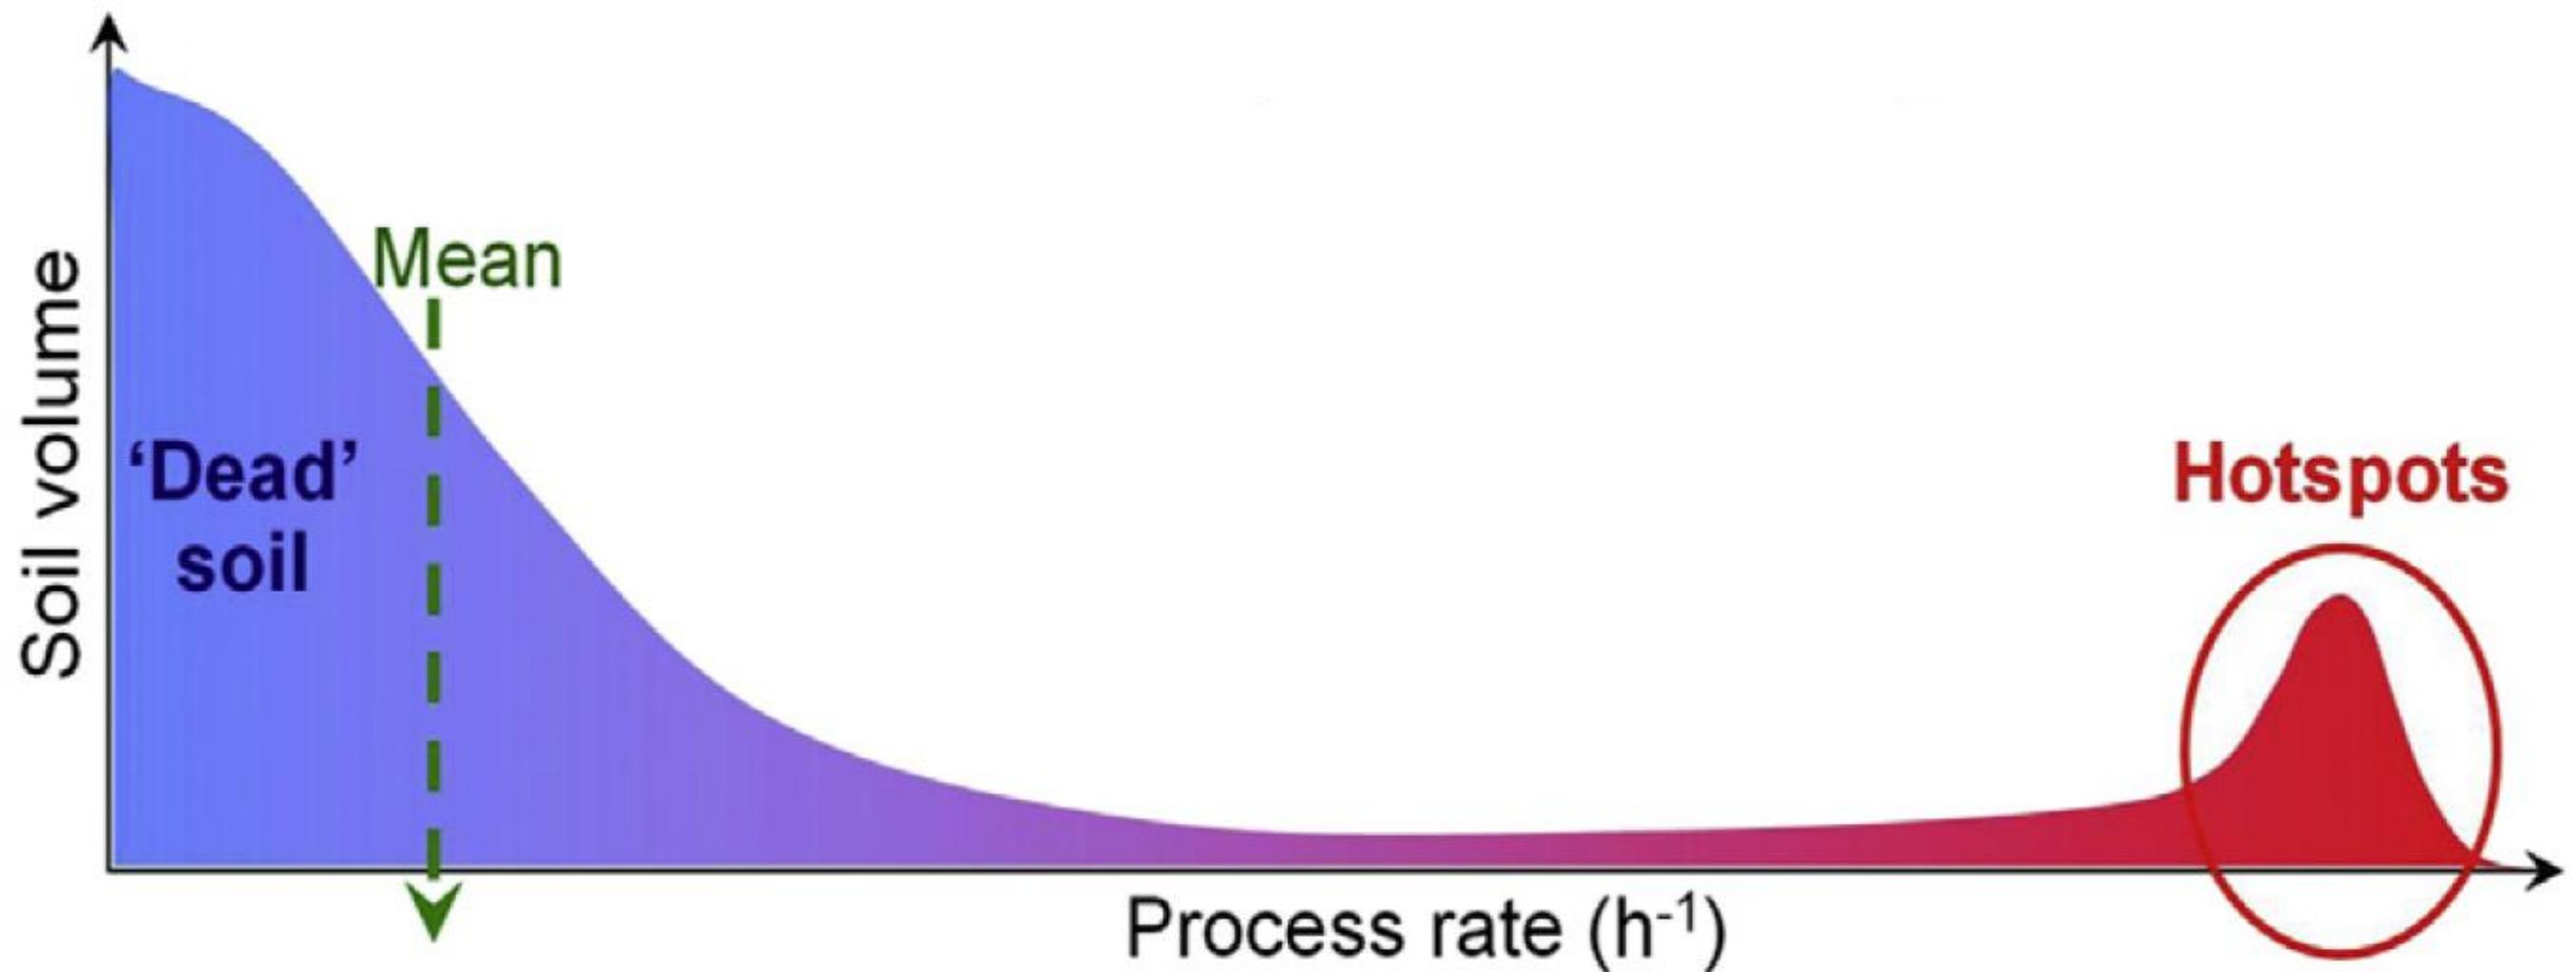

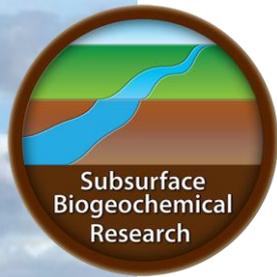

Understanding and accounting for biogeochemical hot spots and moments remains a challenge

Hotspots: small volumes with much higher rates than the mean

McClain et al. 2003; Kuzyakov and Blagodatskaya 2015

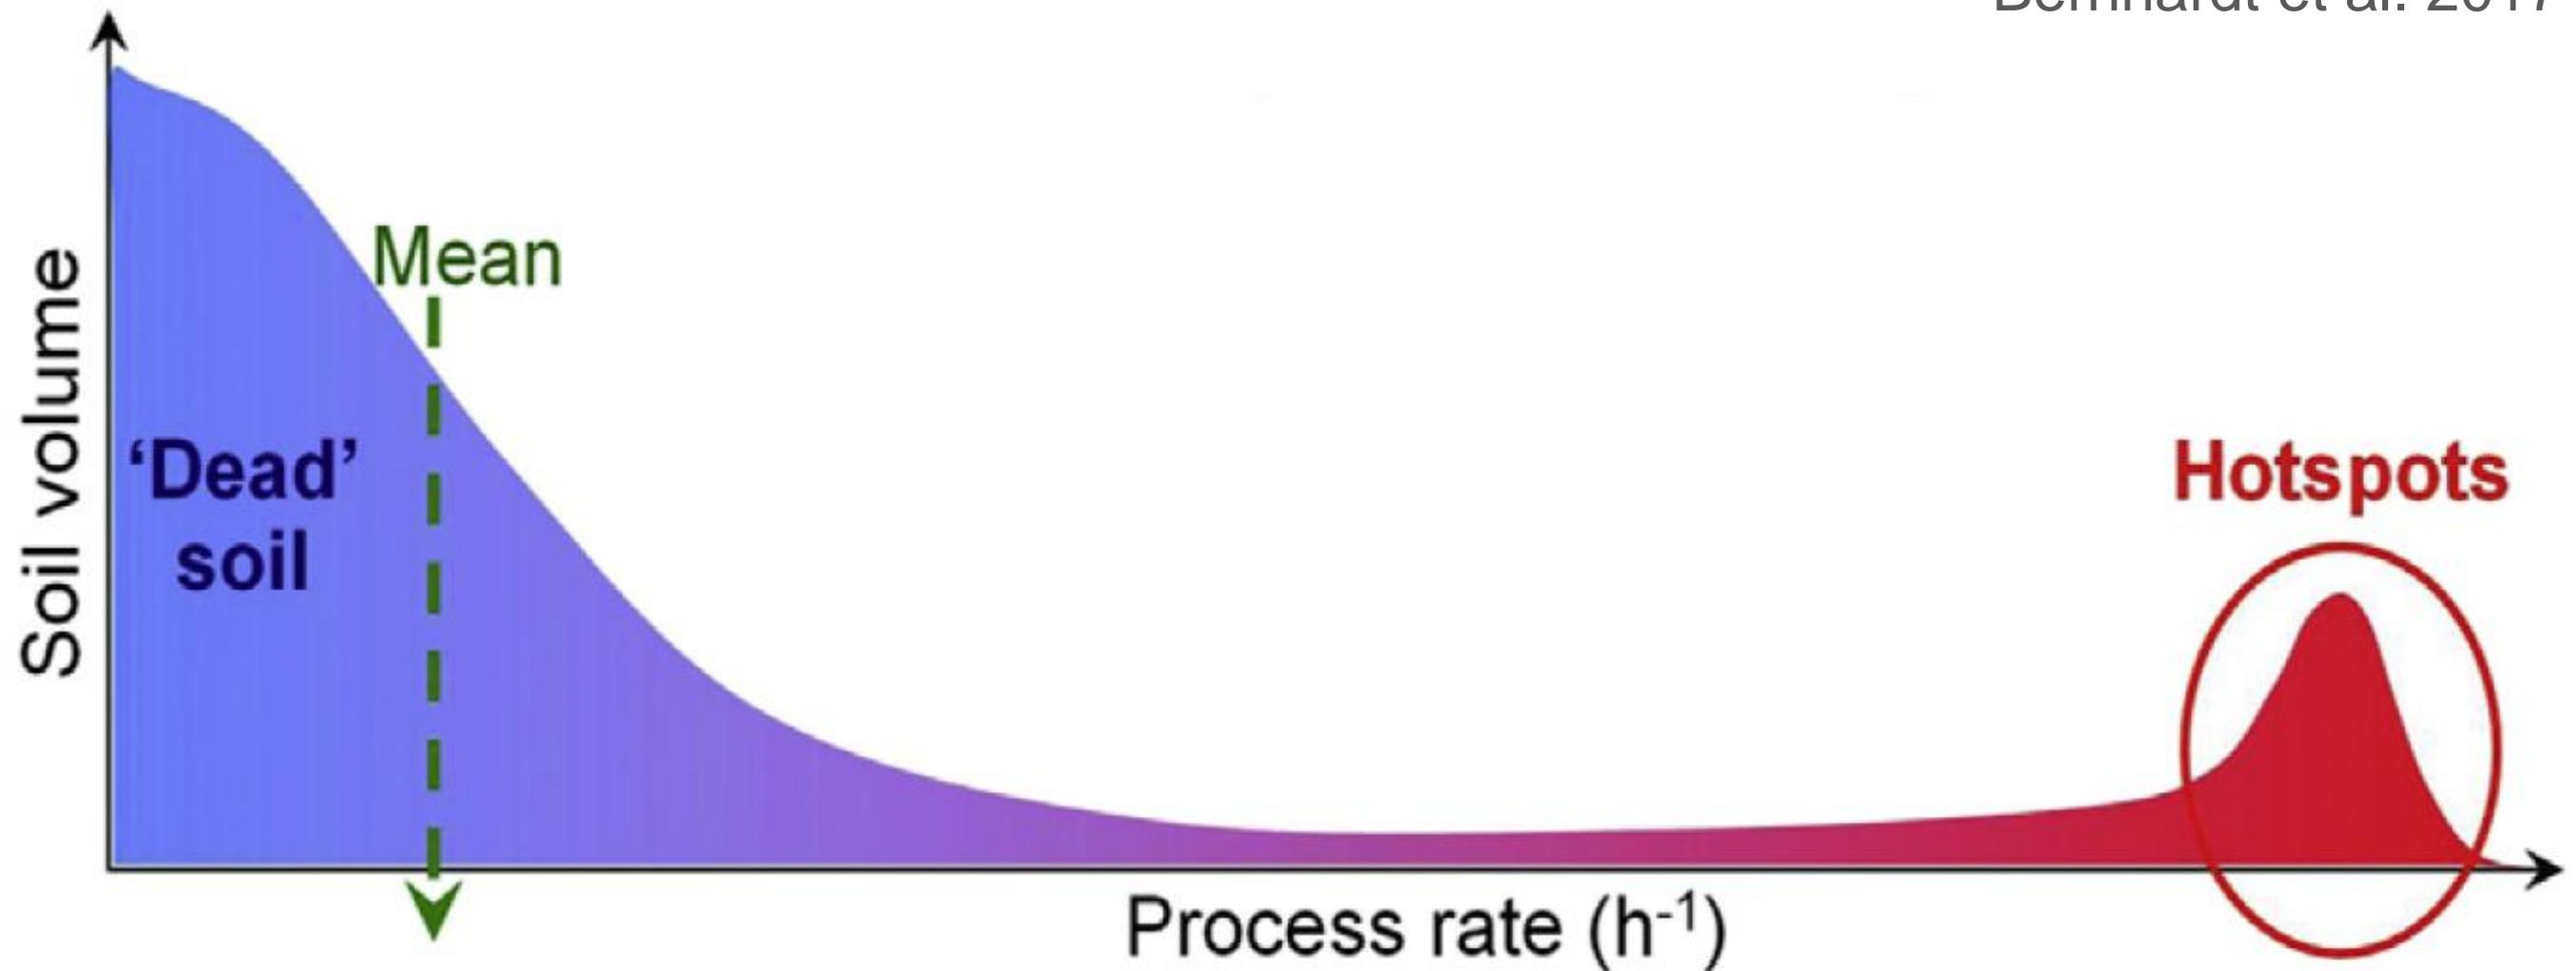

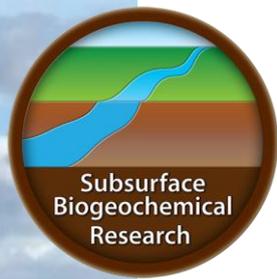

Understanding and accounting for biogeochemical hot spots and moments remains a challenge

Hotspots: small volumes with much higher rates than the mean

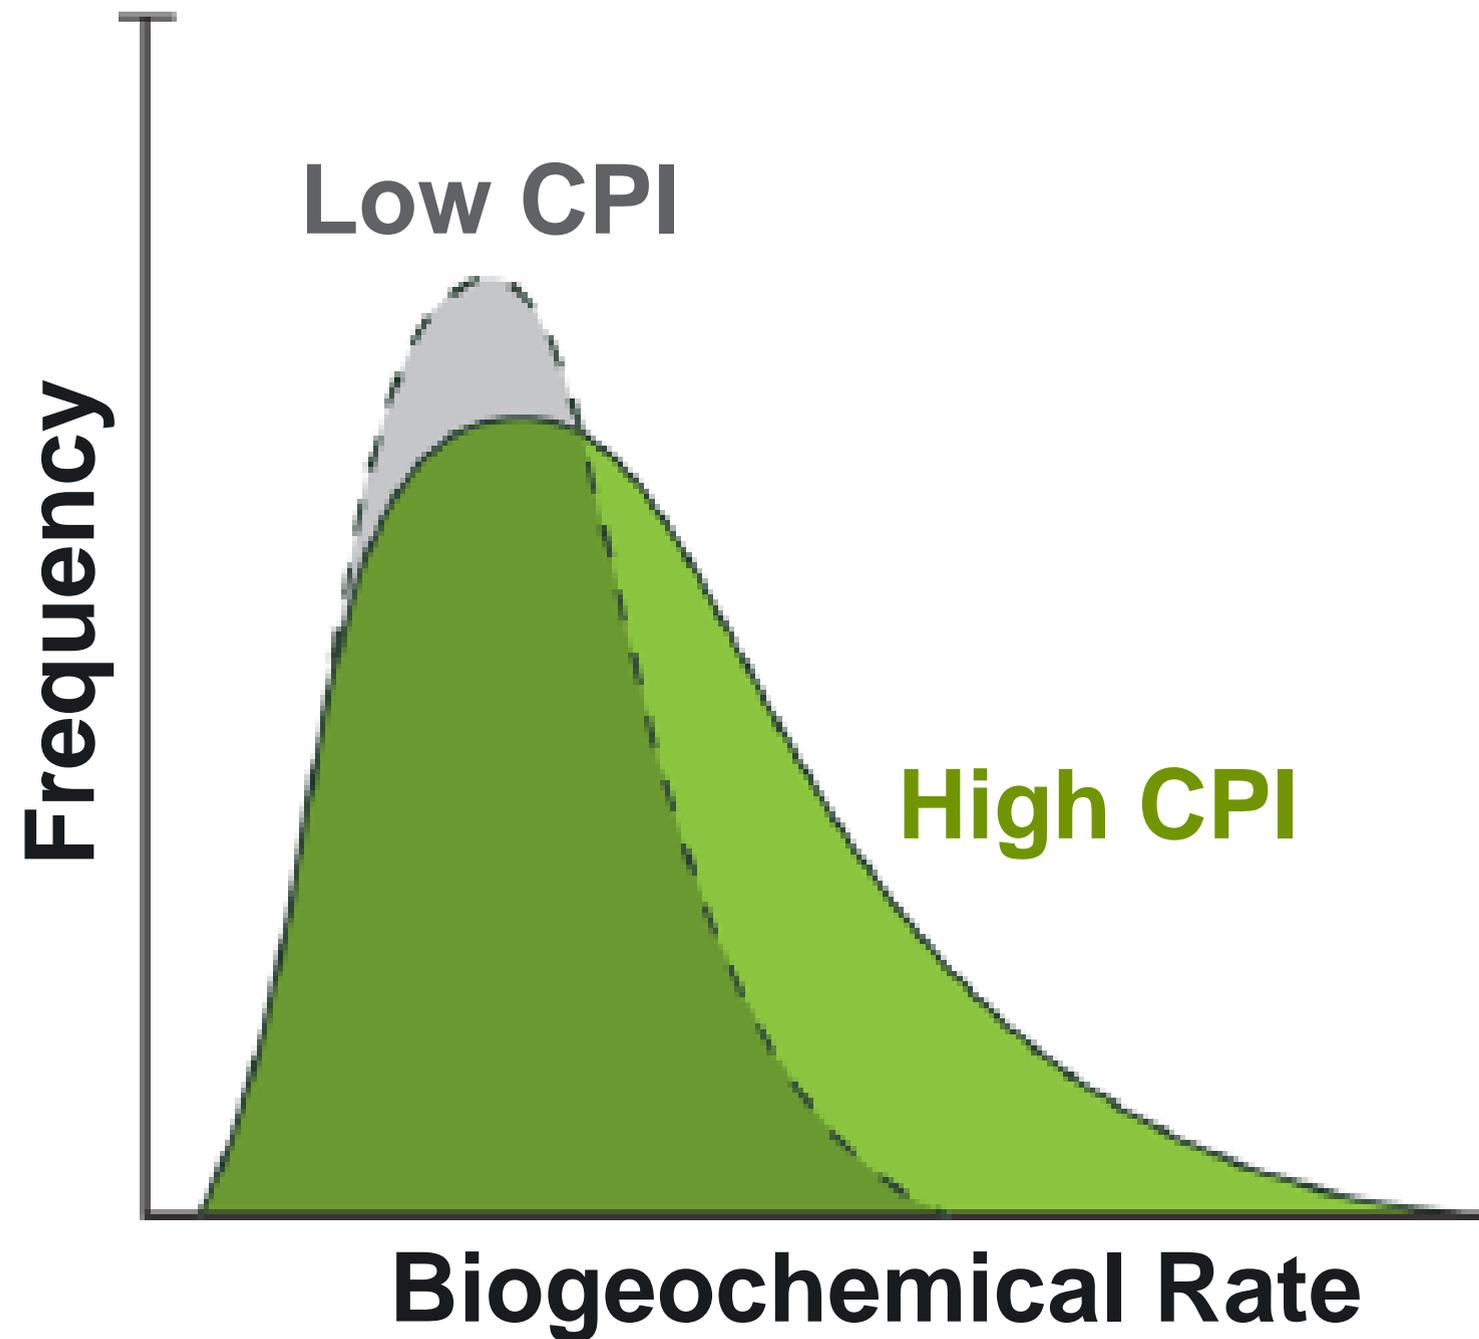

Control Points: rate of sufficient magnitude to affect ecosystem

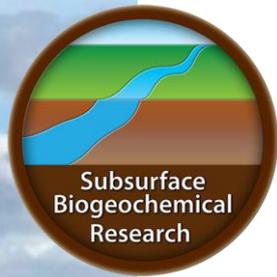

Bernhardt et al. 2017

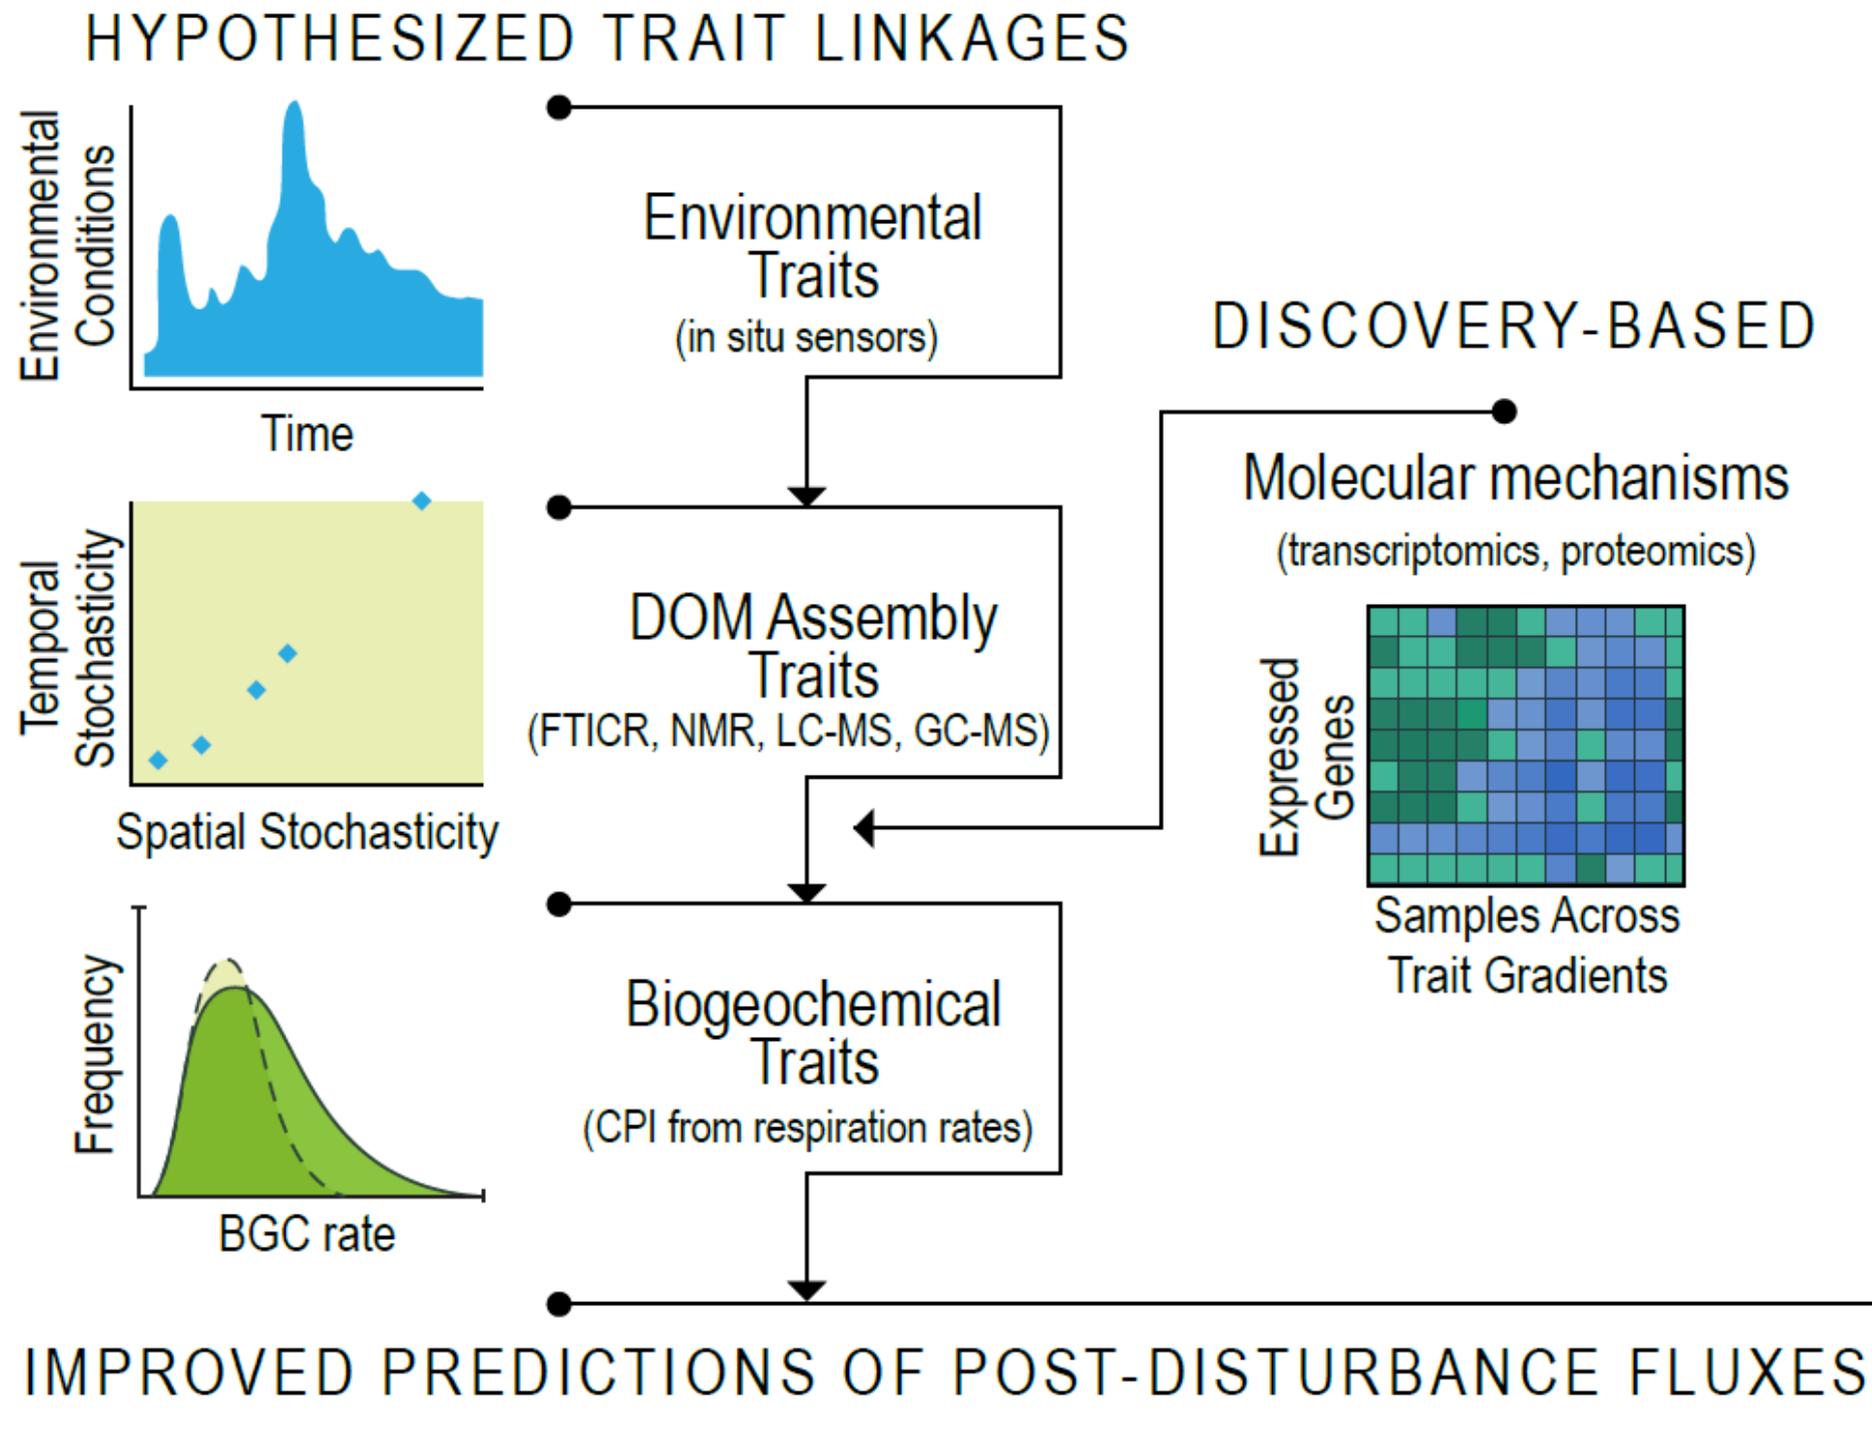

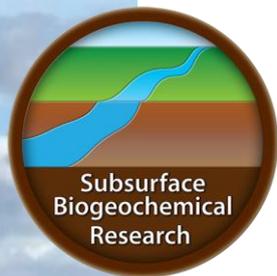

Moving beyond 'hot or not' to understand variation in control point influence (CPI) as a biogeochemical trait

Trait-based framework to understand and predict CPI

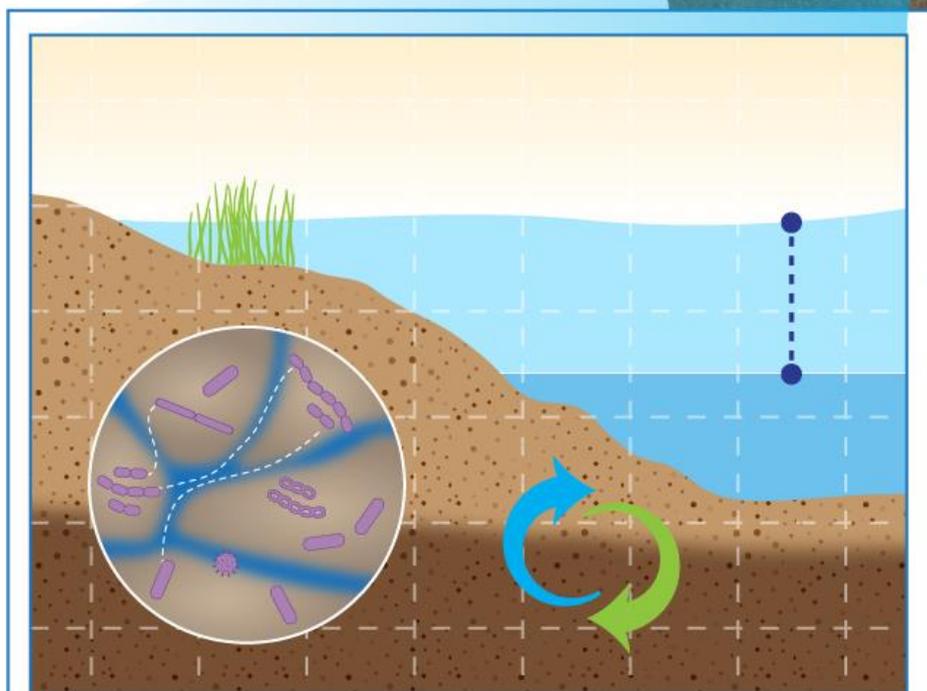

Trait-based framework to complement site-specific models

CURRENT
SITE-SPECIFIC
APPROACH

PROPOSED
TRANSFERABLE
APPROACH

$$\frac{\partial C}{\partial t} = -v \frac{\partial C}{\partial x} + D_L \frac{\partial^2 C}{\partial x^2} - \frac{\partial q}{\partial t}$$

Complex • Numerous Parameters

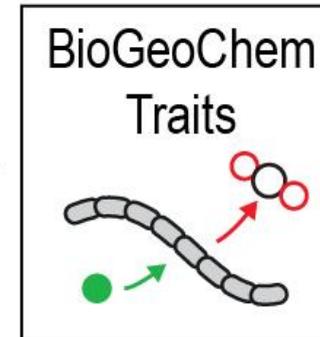

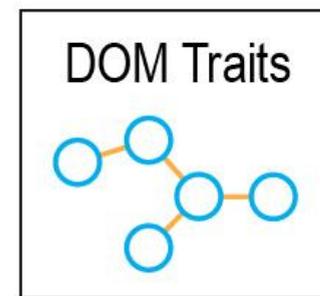

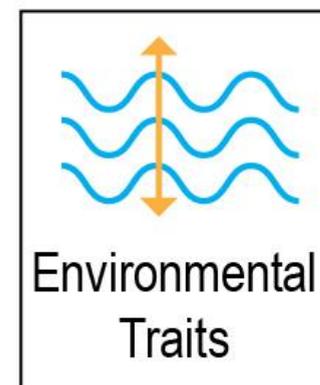

Mechanistic refinement

OUTCOMES

Improved predictions of
post-disturbance fluxes
of energy and materials

Statistical predictions of CPIs

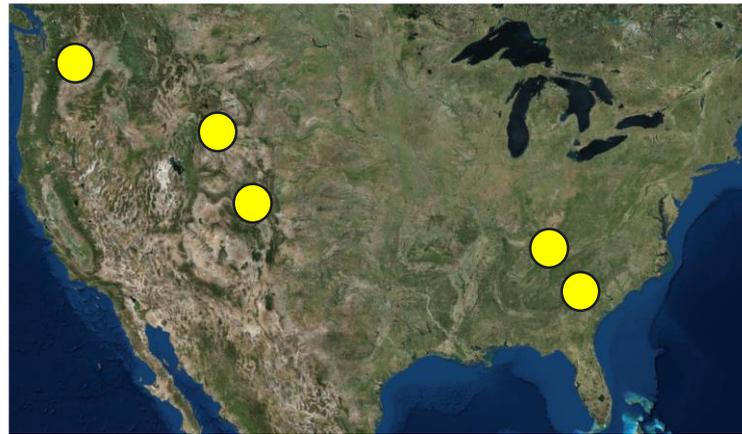

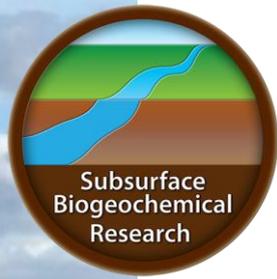

Trait framework

Simplified • Transferable

WHONDERS: For and by the community

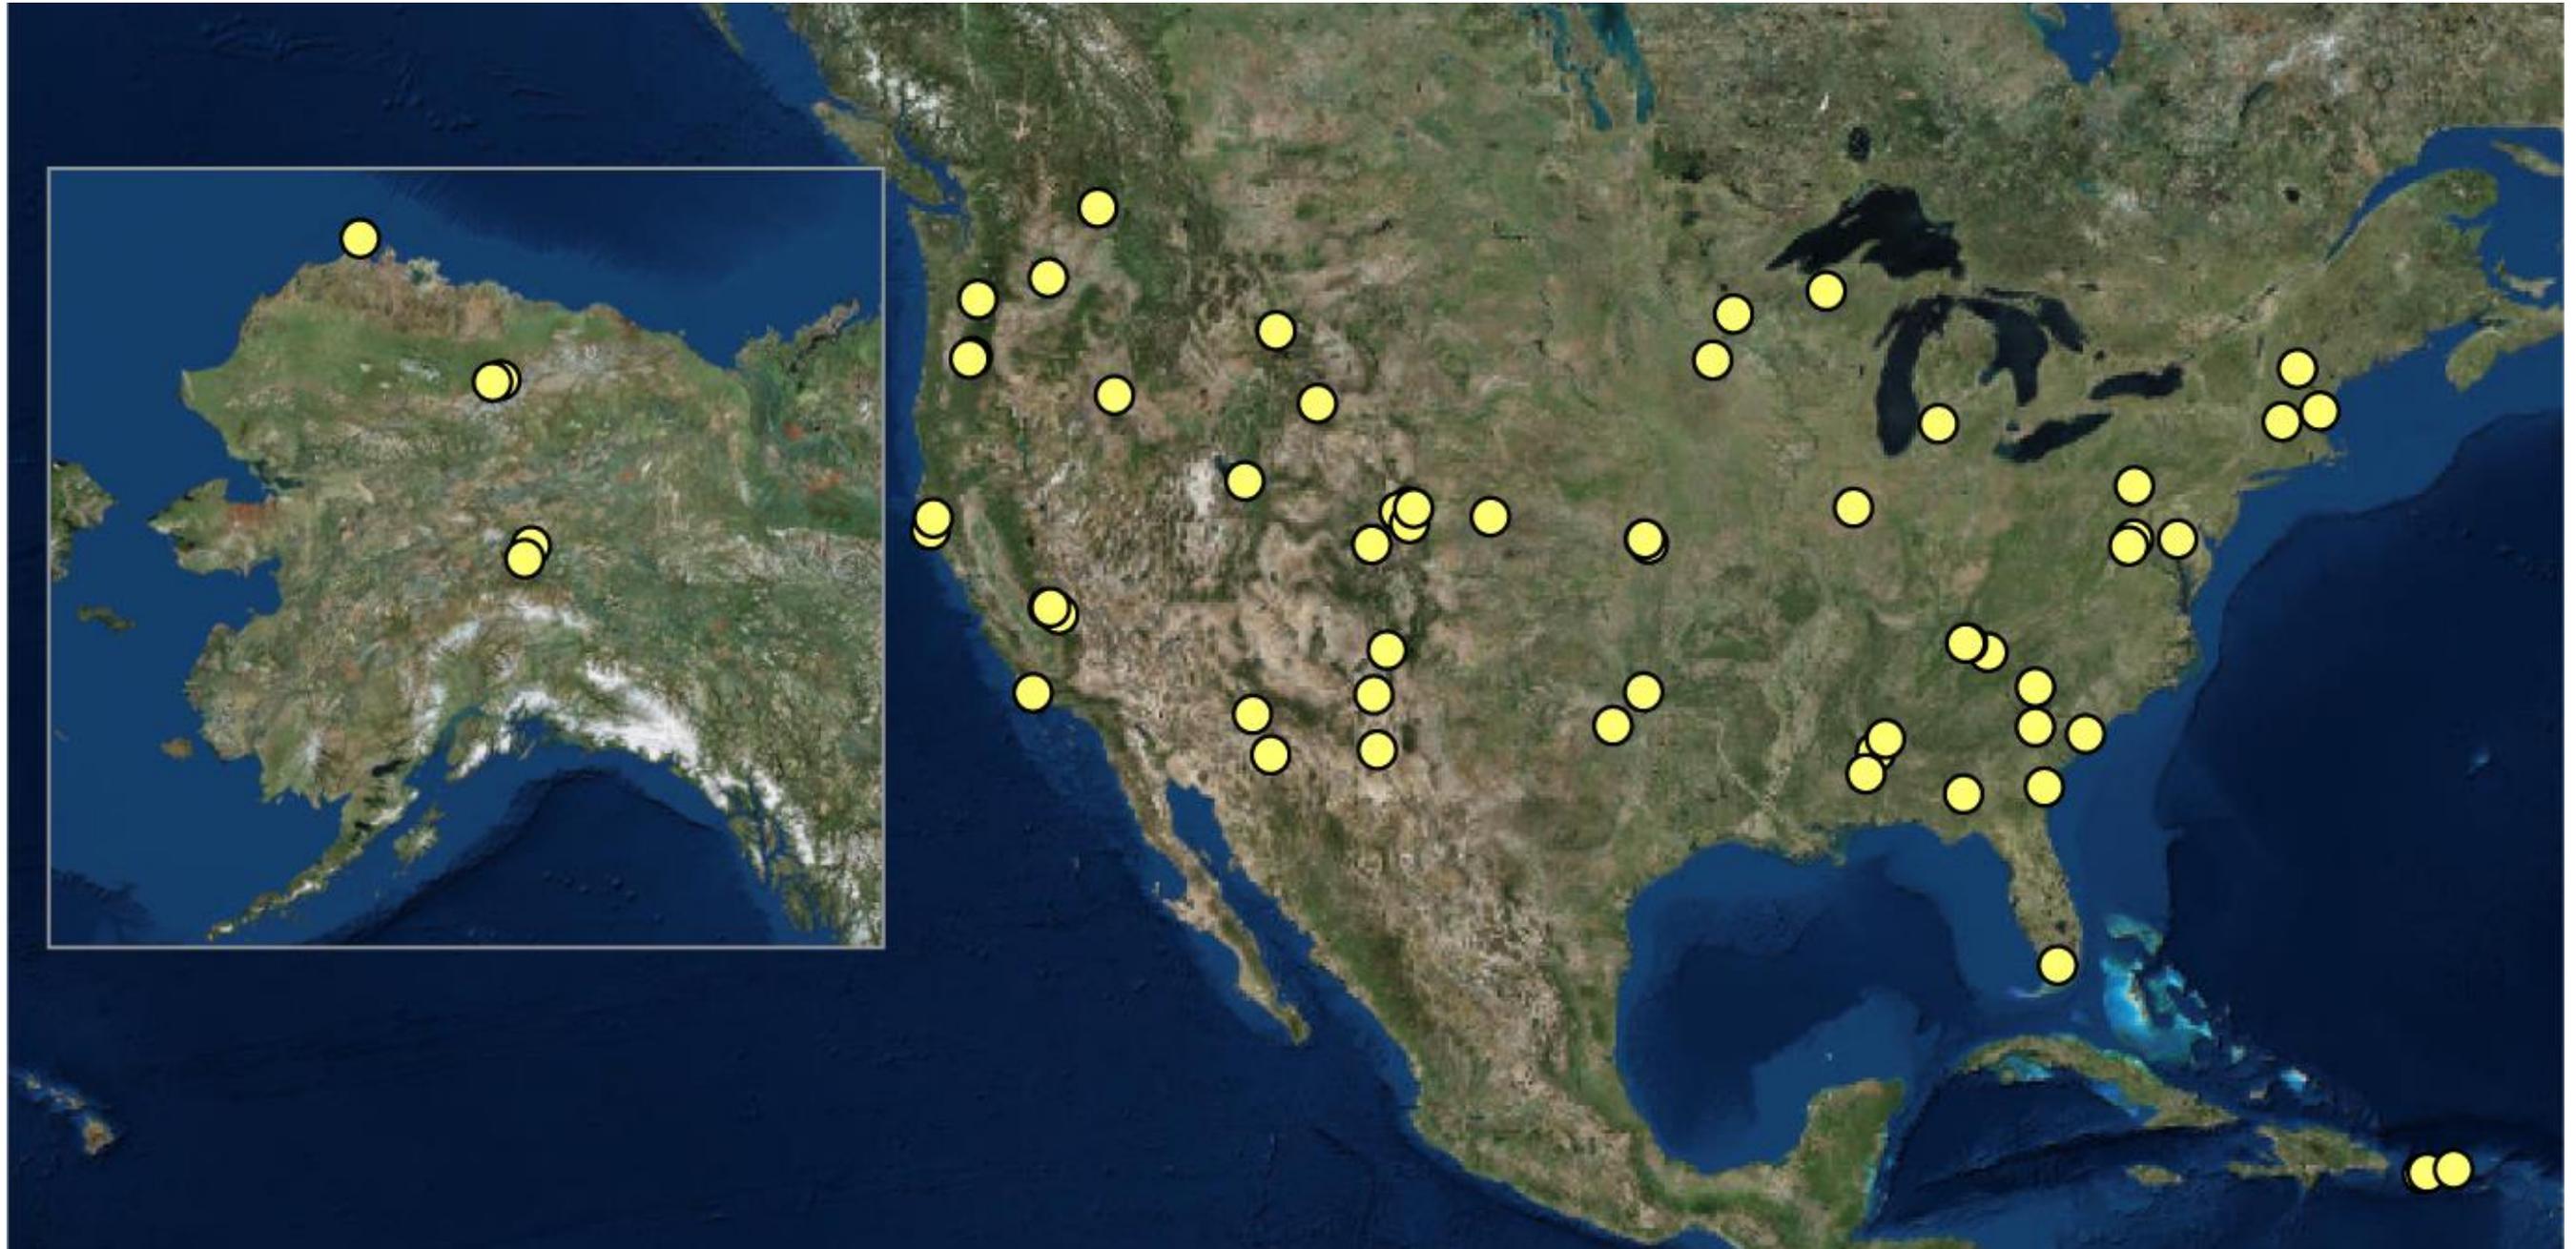

Integrative, model-relevant, FAIR river corridor data for transferability

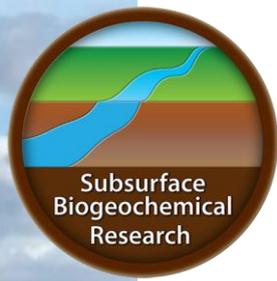

Transferability through community-enabled open science

Integrative, model-relevant, FAIR river corridor data for transferability

Parafluvial hyporheic zones as a model system to build predictive and transferable trait-based framework

Environmental traits

- Sensors
- Public data

DOM traits

- Sediments
- EMSL
- Null modeling

BGC traits (CPI)

- Lab incubations
- Field manipulations
